Census Tract - A census tract is a statistical unit of urban area which unit is reasonably homogeneous with respect to economic status and living conditions. Census tracts are designed to be relatively uniform in area and population. Tracts have been established in the larger cities and census metropolitan areas. Tract boundaries are established in cooperation with local authorities and extend to include part or all of the census metropolitan area of a city.

Family - A family consists of a husband and wife (with or without children who have never married), or a parent with at least one child who has never married, living together in the same dwelling.

Family Income - Family income represents the total of all income reported during the 12-month period ending May 31, 1961, by family members 15 years of age and over.

The reported income of each family member is made up of the total amount received from the following sources:

- (a) gross cash wages, salaries, commissions, and tips (before deductions for income tax, pensions, unemployment insurance etc.);
- (b) net income (gross income less operating expenses) received from own business or from a professional practice;
- (c) family allowances;
- (d) old-age assistance and old-age security payments;
- (e) other government transfer payments, e.g. unemployment insurance, workmen's compensation, veterans' pensions and allowances, disability pensions, mothers' allowances, etc.;
- (f) retirement pensions;
- (g) bond and bank interest and dividends;
- (h) other investment income, e.g. net rents, mortgage interest, estate income, etc.;
- (i) all other money income, e.g. annuities, income from roomers and boarders, alimony, etc.

Census data on family income was derived from a 20 per cent sample survey of non-farm families.

### A STATISTICAL AND GRAPHIC PRESENTATION

### OF URBAN POVERTY

b.y

### H.J. McGonigal 1/

This summary outlines a technique for the graphic expression of statistical data on unfabourable social and economic conditions. Eight potential indicators of socioeconomic conditions were chosen from available urban statistics. The indicators include family income, wage and salary income, employment status, educational attainments and housing conditions. The source of all statistics used was the 1961 Census of Canada. The geographic units used for analysis and mapping were census tracts, the smallest area units for which most census findings have been tabulated and published.

Four cities have been used to illustrate the graphic technique: St. John, New Brunswick; Montreal, Winnipeg and Vancouver. Each city represents a different urban population size (see Table A) and a different geographic region.

For each of the indicators, large scale city maps have been prepared which show the location and intensity of unfavourable conditions as expressed by that indicator. These maps, 32 in number, are displayed around the conference room. Each map contains the city name, the map title and number, and a brief legend including a colour code. Each map has been prepared in 4 colours, each colour representing a different level of disadvantage; in descending order, brown indicates the upper level or best condition, through green, then yellow, to magenta, the lowest level and the poorest condition.

In addition to the graphic presentation using the wall maps, census tract tabulations are included in this report for each of the indicators and each of the four levels. Index maps which show the location of the census tracts are also included.

Comparative statistics for the census metropolitan areas of the four cities are contained in the Tables 1 to 8.

### Definitions

In the titles and legends of the maps and tabulations, certain terms are used which have specific meanings as defined in the 1961 Census. These terms are defined as follows:

Prepared for the Special Planning Secretariat by H.J. McGonigal, Research Officer, ARDA, Canada Department of Forestry.

<sup>2/</sup> Propared by the Graphics Section, Canada Department of Forestry.

### Delinitions

In the titles and legends of the maps and tabulations, certain terms are used which have specific menings as defined in the 1951 Census. These terms are defined as follows:

Frapared for the Special Planning Scorecariat by H.J. McGonigal, Resuarch Officer, 180A, Canada Department of Morestry.

13

Wage Earner - A wage earner is a person 15 years of age or over who worked for others, either part-time or full-time, for wages, salary, tips or piece rates.

Wage & Salary Income - Wage and salary income represents the total amount of money received as gross cash wages and salary, commissions, tips, piece-rate payments, etc., from all employers during the 12-months prior to the Census.

Employment Status - The population without a job during the week prior to enumeration includes everyone without a job (either part-time or full-time) whether or not they were looking for work.

Dwelling & Household - A dwelling is a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall or stairway inside.

A household consists of a person or group of persons occupying one dwelling. The number of households equals the number of occupied dwellings.

Consus data on dwellings was derived from a 20 per cent sample survey of dwellings.

Crowded Dwelling - A "crowded" dwelling is defined as one in which the number of persons exceeds the number of rooms occupied. Only rooms used or sultable for living purposes are counted. Sun-room, summer kitchens, recreation rooms, attic rooms, etc. are counted as rooms only if they are finished off and suitable for year-round living quarters. Not counted as rooms are: bathrooms, clothes closets, pantries, halls or rooms used solely for business purposes.

Bath & Toilet Facilities - "Bath or shower" refers to installed bath or shower facilities operated from a piped water source and controlled by a tap and drain.

"Flush toilet" refers to a flush toilet located inside the building, not necessarily inside the dwelling.

"Exclusive use" refers to use by members of one house-hold only.

Map Features - Census tracts which are uncoloured on the maps had such a small population in 1961 that their statistics were not published individually. (In the case of census sample survey findings, i.e. family income, and dwelling characteristics, no data is published for items with fewer than 250 families and 100 occupied dwellings due to sampling variations).

Wage Earner - A wage sammer is a person is years of age or over who worked for others, sither perceulme or full-time, for wages, salary, tipe or piece rates.

Wage & Salary Income - Wage and solary income represents the total amount of money revelved as gross cash wages and salar commissions, tips, piace-rate payments, etc., from all employers during the I2-months orlor to the Geneus.

Employment Status - The population without a job ewer prior to enumeration includes everyone without a job (either part-time or full-time) whether or not they were look work.

Dwelling & Household - A dwelling is a structurally separate set of living quarters, with a private entrance sither from outside the bullding or from a common ball or stringer invited

A household consists of a person or group of persons occupying one dwalling. The number of households equals the number of cocupled dwallings,

Consus data on dwallings was derived from a 20 per or sample survey of dwallings.

Growded Dwalling - A "crowded" dwelling is defined as one to which the number of persons exceeds the number of roums counted only rooms used or sultable for living purposes are counted. Sun-room, summer kitchens, recreation rooms, attle rooms, etc. ere counted as rooms only if they are finished off and suitabler year-round living quarters. Not counted as rooms are batterooms, clothes closets, pantries, balls or rooms used earlier business purposes.

"Flush toilet" refers to a flush toilet located inste

"Exclusive use" refers to use by members of one house

Map Features - Census tracts which are uncoloured on the maps had such a small population in 1961 that their atailetics were not published individually. (In the case of census eample autindings, i.e. family income, and dwelling characteristics, as data in published for items with fewer than 250 families and cocupled dwellings due to smapling variations).

In the case of Montreal and St. John, some of the outlying census tracts and suburban municipalities which are part of the census metropolitan areas of these cities are not covered by the maps. (see Table A). The large areas of these cities made it impractical to use a map which permitted recognition of each of the small central census tracts while also covering the entire metro area. The lower density suburban areas have been dropped in favour of the analysis of the populous central tracts.

### INDICATOR MAPS

Level	Map Colour	Generalization
I	Brown	Best Condition
II	Green	Intermediate Condition
III	Yellow	Inferior Condition
IV	Magenta	Worst Condition

### MAP NO. 1 - Family Incomes

The number of families with annual income less than \$3,000, as a percentage of the total number of families in a census tract; expressed in four percentage levels. For example: Level IV, 30% or more of the families — at least 3 out of 10 — have income below three thousand dollars; tracts in this category are shown in magenta on Map No. 1.

Level	Percentag	e Range
I	0	9.9%
III		29.9%
IA	30.0% +	

### MAP NO. 2 - Wage and Salary Incomes

The number of male wage earners with annual wage and salary income less than \$3,000 as a percentage of the total number of male wage earners in a census tract.

Level	Percentage Range
I	0 - 19.9%
II	20.0 - 29.9%
III	30.0 - 39.9%
IV	40.0% +

### MAP NO. 3 - Male Employment Status

The male population 15 years of age and over who were without a job during the week prior to enumeration in the 1961 Census, as a percentage of the total male population 15 years of age and over in a census tract.
